At the outdoor theater of the ancient ruins of Ostia Antica

This joint program with the Faculty of Architecture at the University of Rome, which boasts one of the most distinguished histories in Europe, was conducted in Rome for the 2024 academic year. The site proposed for redevelopment is a flood-prone fishing village area located near the ancient ruins of Ostia Antica, at the mouth of the Tiber River in the heart of Rome.

In collaboration with Italian and Japanese teams, we explored proposals for civil engineering infrastructure at a macro scale, alongside adaptable wooden infill solutions. The program included workshops for proposal development, as well as numerous site visits aimed at understanding the evolution of society and architecture from ancient Rome to the present day, resulting in a rich and comprehensive learning experience.
